

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

the only cases I know of in which Leach's Petrels have been found so near land. One of the skins is now in my possession; the other is in the collection of Mr. Arthur Helme of Millers Place, L. I. — ROBERT C. MURPHY, *Mt. Sinai, Long Island, N. Y.*

Two Additional Records of the European Widgeon (*Mareca penelope*).—In the 'Wilson Bulletin,' Vol. XI, No. 4, p. 112, under the title 'Notes from Sandusky, Ohio,' Mr. E. L. Moseley writes, without data: "Two specimens of the Widgeon (*Mareca penelope*) were mounted by John Herb this spring."

Through the kindness of Mr. Moseley I am enabled to state that one specimen, a male, was shot by Mr. Edward Hinde on April 18, 1904, some five miles east of Sandusky on the West Huron marsh, which forms an extension of Sandusky Bay. This bird is now in possession of Mr. William Hanson.

The other specimen, also a male, was brought to Mr. Herb, taxidermist, on April 20, 1904, having been shot on Sandusky Bay about two days previous by Mr. Henry Hartung in whose possession it now is. These records make the twentieth for the interior.—RUTHVEN DEANE, *Chicago, Ill.*

An Unusual Migration of Ducks in Ontario.—In February 1899, an unusual inland flight of ducks was noticed in various parts of southern Ontario. Mr. John Boyd has lately placed at my disposal letters relating to this flight, received by him in response to a letter on the subject published in the Toronto 'Globe' of March 10, 1899. These letters, in addition to the notes I already had, are sufficient to show how important and wide-spread the movement was.

During the second week of February ducks were picked up in various parts of Toronto, on the streets, in the freight yards, in open fields in the suburbs, and on the roads leading into the city; they were found principally by the drivers of delivery wagons, and so exhausted were the birds, that in no case did they survive more than a day or two, in confinement.

The species were principally Cowheens (*Harelda hyemalis*), with a few Golden-eyes (*Clangula clangula americana*) and American Mergansers (*Merganser americana*); the species being in about the same proportion as is usual on Lake Ontario in winter. Though a few Bluebills (*Aythya marila*) winter about Toronto none were noticed in the flight and it is possible that they were too weak to attempt it.

I heard of about thirty ducks being found about Toronto, though the number actually taken must have been greater. A Grebe (probably *Colmybus auritus*), was picked up alive a few miles west of Toronto, and this bird survived three days.

At Grimsby, on the south shore of Lake Ontario, about twenty-seven miles west of Niagara Falls, Ont., Mr. Edward Farewell picked up about a dozen dead ducks on the lake shore; of these two were Mergansers, and
